

Course: BCSNT 6063 – Object Oriented Programming

Program: Bsc Csit

Semester: 2nd Semester

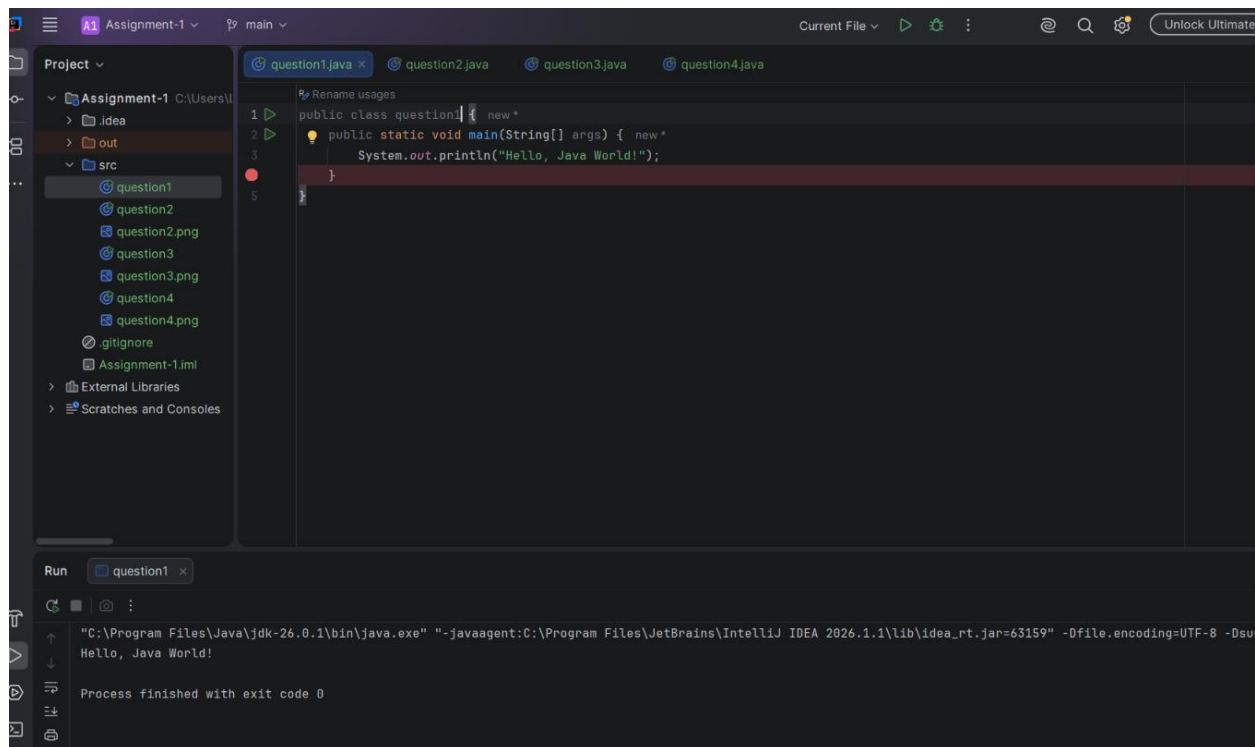

Submitted By: Yamuna Khadka

Assignment: Frist

2. Basic Java Programming Tasks Write and run the following programs in IntelliJ: A. Hello World Program

- Create a class Main.
- Print: Hello, Java World!

```
public class question1 {  
    public static void main(String[] args) {  
  
        System.out.println("Hello, Java World!");  
    }  
}
```

B. Variables & Data Types Write a program demonstrating: • int, double, boolean, char, String • Print their values.

```
public class question2 {  
    public static void main(String[] args) {  
  
        int number = 10;  
        double price = 99.99;  
        boolean isJavaFun = true;  
        char grade = 'A';  
        String name = "Java Programming";  
  
        System.out.println("int value: " + number);  
        System.out.println("double value: " + price);  
        System.out.println("boolean value: " + isJavaFun);  
        System.out.println("char value: " + grade);  
        System.out.println("String value: " + name);  
    }  
}
```

```
}  
}
```

C. Operators Program Write a Java program showing: ● Arithmetic operators (+, -, \*, /, %) ● Relational operators (>,

```
public class question3 {  
    public static void main(String[] args) {  
  
        int a = 10;  
        int b = 5;  
  
        // Arithmetic  
        System.out.println("Addition: " + (a + b));  
        System.out.println("Subtraction: " + (a - b));  
        System.out.println("Multiplication: " + (a * b));
```

```
System.out.println("Division: " + (a / b));
System.out.println("Modulus: " + (a % b));
```

```
// Relational
```

```
System.out.println("a > b: " + (a > b));
System.out.println("a < b: " + (a < b));
System.out.println("a == b: " + (a == b));
System.out.println("a != b: " + (a != b));
```

```
// Logical
```

```
boolean x = true;
boolean y = false;
```

```
System.out.println("x && y: " + (x && y));
System.out.println("x || y: " + (x || y));
System.out.println("!x: " + (!x));
```

```
}
}
```

The screenshot shows an IDE with a project named 'Assignment-1'. The source files include 'question1', 'question2', 'question3', 'question4', 'question4.png', and 'Assignment-1.iml'. The 'Run' window displays the output of 'question3.java', which is a Java program performing arithmetic and logical operations on variables a and b.

```
public class question3 {
    public static void main(String[] args) {
        int a = 10;
        int b = 5;

        // Arithmetic
        System.out.println("Addition: " + (a + b));
        System.out.println("Subtraction: " + (a - b));
        System.out.println("Multiplication: " + (a * b));
        System.out.println("Division: " + (a / b));
        System.out.println("Modulus: " + (a % b));

        // Relational
        System.out.println("a > b: " + (a > b));
        System.out.println("a < b: " + (a < b));
        System.out.println("a == b: " + (a == b));
        System.out.println("a != b: " + (a != b));

        // Logical
        boolean x = true;
        boolean y = false;
        System.out.println("x && y: " + (x && y));
        System.out.println("x || y: " + (x || y));
        System.out.println("!x: " + (!x));
    }
}
```

Run output:

```
"C:\Program Files\Java\jdk-26.0.1\bin\java.exe" "-javaagent:C:\Program Files\JetBrains\IntelliJ IDEA 2026.1.1\lib\idea_rt.jar=63155" -Dfile.encoding=UTF-8 -Dsun.stdout.encoding=UTF-8
Addition: 15
Subtraction: 5
Multiplication: 50
Division: 2
Modulus: 0
a > b: true
a < b: false
a == b: false
a != b: true
x && y: false
x || y: true
!x: false

Process finished with exit code 0
```

D. User Input Program (Bonus for extra marks) Use Scanner to take two numbers and print their sum.

```
import java.util.Scanner;

public class question4 {
    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        System.out.print("Enter first number: ");
        int num1 = sc.nextInt();

        System.out.print("Enter second number: ");
        int num2 = sc.nextInt();

        int sum = num1 + num2;

        System.out.println("Sum = " + sum);

        sc.close();
    }
}
```
